

Shobhit Rajput

Backend Developer

Backend Developer training with 3 months of practical experience in building scalable backend applications using Node.js, Express.js, and MongoDB. Worked on REST API development, authentication & authorization (JWT), middleware implementation, and database management. Good understanding of MVC architecture, error handling, and API security best practices. Eager to contribute to real-world backend projects and grow as a software developer.

08/2021 - 07/2025

6.5 CGPA

TRAINING

Backend Developer

SESTInfotech Pvt.Ltd.

11/2025 - Present

Delhi

Achievements/Tasks

- Developed and maintained REST APIs using Node.js, Express.js, and MongoDB.
- Implemented authentication & authorization using JWT and role-based access control (RBAC).
- Designed scalable database schemas and optimized MongoDB queries for performance efficiency.
- Implemented centralized error handling and request validation middleware.
- Ensured API security using environment variables, hashing (bcrypt), and token-based authentication.
- Deployed production-ready backend applications on cloud platforms and managed server configurations.
- Performed API testing and documentation using Postman.
- Maintained version control using Git and GitHub, and implemented CI/CD pipelines using GitHub Actions for smooth deployments.
- Followed MVC architecture and clean code principles to build maintainable and scalable backend systems.
- Focused on writing clean, maintainable, and scalable backend code following best practices.

PROJECTS

Online Food Ordering Website (08/2024 - 06/2025)

- Stack: HTML, CSS, JavaScript, PHP, MySQL
- Developed a dynamic food ordering platform with user and admin dashboards.
- Implemented menu management, cart functionality, and order processing.
- Integrated MySQL database for secure order and user data storage.

Java Quiz Application (08/2023 - 06/2024)

- Stack: Java, Swing, AWT
- Built an interactive quiz system with real-time score tracking and UI components.
- Utilized Java Swing and AWT for graphical user interface.
- Applied core Java concepts and exception handling.

Learning Management System(eGyan) (07/2025 - Present)

- Developed scalable backend services using Node.js, Express.js, and MongoDB for a learning management system.
- Implemented authentication (JWT), password hashing (bcrypt), and protected routes for secure user access.
- Designed REST APIs for dashboards, course management, and lesson tracking.
- Implemented middleware for error handling, validation, and authorization.
- Ensured smooth frontend-backend integration by providing optimized and well-structured API responses.

CERTIFICATES

Cloud Infrastructure Using AWS Certificate

Cloud infrastructure deployment on AWS e.g., EC2, S3, IAM, etc.

Spoken Tutorial, IIT Bombay

JAVA - (2023), C++ - (2022) and PYTHON - (2021).

LANGUAGES

Hindi, English

Full Professional Proficiency
